

# Package ‘tao’

April 24, 2023

## R topics documented:

tao-package . . . . .	<a href="#">1</a>
do.nothing . . . . .	<a href="#">2</a>

<b>Index</b>	<a href="#">3</a>
--------------	-------------------

---

tao-package	<i>That which cannot be packaged.</i>
-------------	---------------------------------------

---

## Description

The package that can be described is not the great Tao package.

## Details

The package that can be documented is not the eternal package  
The procedure that terminates is not the eternal procedure  
The undocumented is the origin of feature and bug  
The documentation is the mother of limitless confusion  
Thus, constantly without desire, one observes the runtime errors  
Constantly with desire, one observes the progress bar  
These two emerge together but differ in name  
Their unity is said to be a mystery  
Mystery of mysteries, the door to the next revision

## Author(s)

Lao Tsu, Aaron A. King

## References

Lao Tsu, Tao Te Ching.

**See Also**

[do.nothing](#), [do.nothing.else](#)

---

do.nothing	<i>If nothing is done, then all will be well.</i>
------------	---

---

**Description**

Nothing is done, nothing is left undone.

**Usage**

```
do.nothing(...)
```

```
do.nothing.else(...)
```

**Arguments**

```
...           Arguments avail not.
```

**Value**

What difference between yes and no?  
What difference between success and failure?  
Must you value what others value, avoid what others avoid?  
How ridiculous!

**Author(s)**

Lao Tsu, Aaron A. King

**Examples**

```
do.nothing()
```

```
## Not run:  
do.nothing.else()
```

```
## End(Not run)
```
