| | |
|----------------------------|-------------------------------|
| <code>as.data.frame</code> | <i>Coerce to a Data Frame</i> |
|----------------------------|-------------------------------|

Description

Functions to coerce an object to a data frame.

Usage

```
## S3 method for class 'gplin'  
as.data.frame(x, ...)
```

Arguments

| | |
|------------------|---|
| <code>x</code> | any R object. |
| <code>...</code> | additional arguments to be passed to or from methods. |

Details

An object of class ‘gplin’ is coerced to a data frame by means of `as.data.frame`.

| | |
|----------------------|--|
| <code>curtail</code> | <i>Curtail a genealogy to the given time</i> |
|----------------------|--|

Description

Discards all nodes beyond the given time.

Usage

```
curtail(object, time = NA, troot = NA)
```

Arguments

| | |
|---------------------|---------------------------------------|
| <code>object</code> | gpsim object. |
| <code>time</code> | logical; return the current time? |
| <code>troot</code> | new root time for curtailed genealogy |

Value

A curtailed genealogy object.

Examples

```

library(ggplot2)

simulate("SIIR",time=5) -> x

plot_grid(
  x |>
    plot(prune=FALSE,points=TRUE),
  x |>
    curtail(time=3) |>
    plot(prune=FALSE,points=TRUE)+
    expand_limits(x=5),
  ncol=1,align="h",axis="tblr"
)

plot_grid(
  x |>
    plot(prune=TRUE,points=TRUE)+
    geom_vline(xintercept=3),
  x |> curtail(time=3) |>
    plot(prune=TRUE,points=TRUE)+
    geom_vline(xintercept=3)+
    expand_limits(x=5),
  ncol=1,align="h",axis="tblr"
)

```

diagram

Genealogy process diagram

Description

Produces a diagram of the genealogy process state.

Usage

```

diagram(
  object,
  prune = TRUE,
  obscure = TRUE,
  m = NULL,
  n = NULL,
  ...,
  digits = 1,
  palette = scales::hue_pal(l = 80, c = 20, h = c(220, 580))
)

## S3 method for class 'gpdiag'
print(x, newpage = is.null(vp), vp = NULL, ...)

```

Arguments

| | |
|---------|--|
| object | gpsim object. |
| prune | logical; prune the genealogy? |
| obscure | logical; obscure the demes? |
| m | width of plotting window, in nodes. By default, the nodes will be adjusted in width to fit the window. |
| n | height of the pockets, in balls. By default, the balls will be adjusted in size to fit the space available. |
| ... | other arguments, ignored. |
| digits | non-negative integer; number of decimal digits to print in the node time |
| palette | color palette for indicating demes. This can be furnished either as a function or a vector of colors. If this is a function, it should take a single integer argument, the number of colors required. If it is a vector, it should have at least as many elements as there are demes in the genealogy. |
| x | An R object. |
| newpage | draw new empty page first? |
| vp | viewport to draw plot in |

Value

A **grid** graphics object (grob), invisibly.

Examples

```
runSIR(Beta=3,gamma=0.1,psi=0.2,S0=100,I0=5,R0=0,time=2,t0=0) -> x
plot(x,points=TRUE,prune=FALSE)
plot_grid(plotlist=list(plot(x,points=TRUE),diagram(x)),
  ncol=1,rel_heights=c(4,1))
```

gendat

Genealogy as a data frame

Description

Converts a given genealogy to a data frame.

Usage

```
gendat(object, obscure = TRUE)
```

Arguments

| | |
|---------|-----------------------------|
| object | a 'gpgen' object. |
| obscure | logical; obscure the demes? |

Value

A list of objects containing the information pertinent for filtering.

| | |
|--------|-----------------------|
| geneal | <i>Bare genealogy</i> |
|--------|-----------------------|

Description

Extracts the bare genealogy from a Markov genealogy process simulation

Usage

```
geneal(object)
```

Arguments

object a 'gp-gen' object.

Value

A bare genealogy object.

| | |
|-----------------------------|------------------------------|
| genealogy diagram internals | <i>Diagramming internals</i> |
|-----------------------------|------------------------------|

Description

Facilities to produce diagrammatic representations of genealogy process states.

Usage

```
genealogyGrob(object, m = NULL, n = NULL, vp = NULL, palette, ...)
```

```
nodeGrob(object, digits = 1, palette, n = NULL, vp = NULL)
```

```
pocketGrob(object, n, vp = NULL)
```

```
ballGrob(object, vp = NULL)
```

```
resizingTextGrob(..., vp = NULL)
```

```
## S3 method for class 'resizingTextGrob'
drawDetails(x, recording = TRUE)
```

```
## S3 method for class 'resizingTextGrob'
preDrawDetails(x)

## S3 method for class 'resizingTextGrob'
postDrawDetails(x)

## S3 method for class 'ballGrob'
drawDetails(x, recording = TRUE)

## S3 method for class 'ballGrob'
preDrawDetails(x)

## S3 method for class 'ballGrob'
postDrawDetails(x)

## S3 method for class 'gpsim'
print(x, ...)

## S3 method for class 'gpngen'
print(x, ...)

## S3 method for class 'gpyaml'
print(x, ...)
```

Arguments

| | |
|-----------|--|
| object | list; pocket structure |
| m | width of plotting window, in nodes. By default, the nodes will be adjusted in width to fit the window. |
| n | length of longest genealogy |
| vp | viewport to draw plot in |
| palette | color palette for indicating demes. This can be furnished either as a function or a vector of colors. If this is a function, it should take a single integer argument, the number of colors required. If it is a vector, it should have at least as many elements as there are demes in the genealogy. |
| ... | arguments to be passed to textGrob . |
| digits | non-negative integer; number of decimal digits to print in the node time |
| x | An R object. |
| recording | A logical value indicating whether a grob is being added to the display list or redrawn from the display list. |

Details

Code for the resizing text adapted from a blog post by Mark Heckmann (<https://ryouready.wordpress.com/2012/08/01/creating-a-text-grob-that-automatically-adjusts-to-viewport-size/>).

getInfo

*getInfo***Description**

Retrieve information from genealogy process simulation

Usage

```
getInfo(
  object,
  prune = TRUE,
  obscure = TRUE,
  t0 = FALSE,
  time = FALSE,
  description = FALSE,
  structure = FALSE,
  yaml = FALSE,
  ndeme = FALSE,
  lineages = FALSE,
  newick = FALSE,
  nsample = FALSE,
  genealogy = FALSE,
  gendat = FALSE
)
```

Arguments

| | |
|-------------|--|
| object | gpsim object. |
| prune | logical; prune the genealogy? |
| obscure | logical; obscure the demes? |
| t0 | logical; return the zero-time? |
| time | logical; return the current time? |
| description | logical; return the description? |
| structure | logical; return the structure in R list format? |
| yaml | logical; return the structure in YAML format? |
| ndeme | logical; return the number of demes? |
| lineages | logical; return the lineage-count function? |
| newick | logical; return a Newick-format description of the tree? |
| nsample | logical; return the number of samples? |
| genealogy | logical; return the lineage-traced genealogy? |
| gendat | logical; return the data-frame format? |

Value

A list containing the requested elements, including any or all of:

t0 the initial time (a numeric scalar)

time the final time (a numeric scalar)

ndeme the number of demes (an integer)

nsample the number of samples (an integer)

newick the genealogical tree, in Newick format

description a human readable description of the state of the genealogy process

yaml the state of the genealogy process in YAML format

structure the state of the genealogy process in R list format

lineages a [tibble](#) containing the lineage count function through time

gendat a [tibble](#) containing the (obscured) genealogy in a data-frame format

genealogy the lineage-traced genealogy (as a raw vector)

Examples

```
simulate("SIIR",time=3,psi1=1,psi2=0) |>
  simulate(Beta1=2,gamma=2,time=10,psi1=10,psi2=1) |>
  plot()
```

```
runSIIR(Beta1=10,Beta2=8,
  S0=200,I1_0=10,I2_0=8,R0=0,time=0,t0=-1) |>
  simulate(psi1=10,time=2) |>
  plot(points=TRUE,obscure=FALSE)
```

```
simulate("SIIR",Beta1=2,Beta2=50,gamma=1,psi1=2,
  S0=300,I1_0=20,I2_0=2,time=5) |>
  lineages() |>
  plot()
```

lbdp

Linear birth-death-sampling model

Description

The genealogy process induced by a simple linear birth-death process with constant-rate sampling.

Usage

```
runLBDP(time, t0 = 0, lambda = 2, mu = 1, psi = 1, chi = 0, n0 = 5)

continueLBDP(object, time, lambda = NA, mu = NA, psi = NA, chi = NA)

lbdp_pomp(x, lambda, mu, psi, chi = 0, n0 = 1, t0 = 0)

lbdp_exact(x, lambda, mu, psi, chi = 0, n0 = 1)
```

Arguments

| | |
|--------|---|
| time | final time |
| t0 | initial time |
| lambda | per capita birth rate |
| mu | per capita death rate |
| psi | per capita non-destructive sampling rate |
| chi | per capita destructive sampling rate |
| n0 | population size at time t0 |
| object | either the name of the model to simulate <i>or</i> a previously computed ‘gpsim’ object |
| x | genealogy in phylopomp format (i.e., an object that inherits from ‘gpgen’). |

Details

`lbdp_pomp` constructs a **pomp** object containing a given set of data and a linear birth-death-sampling process.

`lbdp_exact` gives the exact log likelihood of a linear birth-death process with (optionally destructive) sampling, conditioned on the population size at time 0.

Value

`runLBDP` and `continueLBDP` return objects of class ‘gpsim’ with ‘model’ attribute “LBDP”.

`lbdp_exact` returns the log likelihood of the genealogy. Note that the time since the most recent sample is informative.

See Also

More example genealogy processes: `moran`, `s2i2r2`, `seir`, `si2r`, `siir`, `simulate()`, `sir`, `strains`, `twospecies`, `twoundead`

Examples

```
simulate("LBDP",time=4) |> plot(points=TRUE)

simulate("LBDP",lambda=2,mu=1,psi=3,n0=1,time=1) |>
  simulate(time=10,lambda=1) |>
  plot()

simulate("LBDP",time=4) |>
  lineages() |>
  plot()
```

| | |
|----------|-------------------------------|
| lineages | <i>Lineage-count function</i> |
|----------|-------------------------------|

Description

Lineage-counts, saturations, and event-codes.

Usage

```
lineages(object, prune = TRUE, obscure = TRUE)

## S3 method for class 'gplin'
plot(x, ..., palette = scales::hue_pal(l = 30, h = c(220, 580)))
```

Arguments

| | |
|---------|--|
| object | gpsim object. |
| prune | logical; prune the genealogy? |
| obscure | logical; obscure the demes? |
| x | object of class 'gpgen' |
| ... | passed to theme . |
| palette | color palette for branches. This can be furnished either as a function or a vector of colors. If this is a function, it should take a single integer argument, the number of colors required. If it is a vector, it should have at least as many elements as there are demes in the genealogy. |

Details

This function extracts from the specified genealogy several important time-varying quantities. These include:

lineages number of lineages through time
saturation the number of lineages emerging from the event
event_type an integer coding the type of event

If the genealogy has been obscured (the default), the number in the `lineages` returned is the total number of lineages present at the specified time and the saturation is the total saturation. If the genealogy has not been obscured (`obscure = FALSE`), the deme-specific data are returned. In this case, the `deme` column specifies the pertinent deme.

The event types are:

- 0** no event,
- 1** a root,
- 1** a sample event,
- 2** a non-sample event,
- 3** the end of the time interval, which may or may not coincide with the latest tip of the genealogy.

Value

A [tibble](#) containing information about the genealogy. See Details for specifics. The [tibble](#) returned by `lineages` has a [plot](#) method.

Examples

```
library(tidyverse)

pal <- c("#00274c", "#ffcb05")

simulate("SIIR", time=3) -> x
plot_grid(
  x |> plot(),
  x |> lineages() |> plot(),
  x |> plot(obscure=FALSE, palette=pal),
  x |> lineages(obscure=FALSE) |>
    plot(palette=pal, legend.position=c(0.8, 0.9)),
  align="v", axis="b",
  ncol=2, byrow=FALSE
)
```

moran

The classical Moran model

Description

The Markov genealogy process induced by the classical Moran process, in which birth/death events occur at a constant rate and the population size remains constant.

Usage

```
runMoran(time, t0 = 0, mu = 1, psi = 1, n = 100)

continueMoran(object, time, mu = NA, psi = NA)

moran_exact(x, n = 100, mu = 1, psi = 1)
```

Arguments

| | |
|--------|---|
| time | final time |
| t0 | initial time |
| mu | per capita event rate |
| psi | per capita sampling rate |
| n | population size |
| object | either the name of the model to simulate <i>or</i> a previously computed ‘gpsim’ object |
| x | genealogy in phylopomp format (i.e., an object that inherits from ‘gpgen’). |

Details

`moran_exact` gives the exact log likelihood of a genealogy under the uniformly-sampled Moran process.

Value

`runMoran` and `continueMoran` return objects of class ‘gpsim’ with ‘model’ attribute “Moran”.
`moran_exact` returns the log likelihood of the genealogy.

References

P.A.P. Moran. Random processes in genetics. *Mathematical Proceedings of the Cambridge Philosophical Society* **54**, 60–71, 1958. doi:10.1017/s0305004100033193.

More example genealogy processes: `lbdp`, `s2i2r2`, `seir`, `si2r`, `siir`, `simulate()`, `sir`, `strains`, `twospecies`, `twoundead`

newick

Newick output

Description

Extract a Newick-format description of a genealogy.

Usage

```
newick(object, prune = TRUE, obscure = TRUE)
```

Arguments

| | |
|---------|-------------------------------|
| object | gpsim object. |
| prune | logical; prune the genealogy? |
| obscure | logical; obscure the demes? |

Value

A string in Newick format.

Examples

```
simulate("SIIR",time=1) |> newick()
```

| | |
|--------------|------------------------------|
| parse_newick | <i>parse a Newick string</i> |
|--------------|------------------------------|

Description

Parses a Newick description and returns a binary version of the genealogy.

Usage

```
parse_newick(x, t0 = 0, tf = NA)
```

Arguments

| | |
|----|---|
| x | character; the Newick description. See Details for specifics. |
| t0 | numeric; the root time. |
| tf | numeric; the current or final time. |

Details

parse_newick can only handle a subset of the full Newick specification. In particular, labels are assumed to be of the form <TYPE>_<DEME>_<LABEL>, i.e., each label has three parts, separated by underscores ('_'). The parts are as follows.

- TYPE must be a single character from among the following: 'b', 'g', 'm', 'o'.
 - 'b' signifies a sample.
 - 'g' signifies an internal node.
 - 'm' signifies a root.
 - 'o' indicates an extant lineage.
- DEME must be a non-negative integer, specifying the deme in which the branch resides. If deme information is not present, use 0.
- LABEL is ignored and may be left out.

Value

An object of class "gpgen".

s2i2r2

*Two-host infection model with waning, immigration, and demography.***Description**

The population is structured by infection progression and host species.

Usage

```
runS2I2R2(
  time,
  t0 = 0,
  Beta11 = 4,
  Beta12 = 0,
  Beta22 = 4,
  gamma1 = 1,
  gamma2 = 1,
  psi1 = 1,
  psi2 = 0,
  omega1 = 0,
  omega2 = 0,
  b1 = 0,
  b2 = 0,
  d1 = 0,
  d2 = 0,
  iota1 = 0,
  iota2 = 0,
  S1_0 = 100,
  S2_0 = 100,
  I1_0 = 0,
  I2_0 = 10,
  R1_0 = 0,
  R2_0 = 0
)

continueS2I2R2(
  object,
  time,
  Beta11 = NA,
  Beta12 = NA,
  Beta22 = NA,
  gamma1 = NA,
  gamma2 = NA,
  psi1 = NA,
  psi2 = NA,
  omega1 = NA,
  omega2 = NA,
```

```
b1 = NA,  
b2 = NA,  
d1 = NA,  
d2 = NA,  
iota1 = NA,  
iota2 = NA  
)
```

Arguments

| | |
|----------------|---|
| time | final time |
| t0 | initial time |
| Beta11, Beta22 | transmission rates within species 1 and 2, respectively |
| Beta12 | transmission from species 2 to species 1 |
| gamma1, gamma2 | recovery rates for species 1 and 2, respectively |
| psi1, psi2 | per capita sampling rates |
| omega1, omega2 | rates of waning of immunity |
| b1, b2 | per capita birth rates |
| d1, d2 | per capita death rates |
| iota1, iota2 | infection importation rates |
| S1_0, S2_0 | initial sizes of susceptible populations |
| I1_0, I2_0 | initial sizes of infected populations |
| R1_0, R2_0 | initial sizes of immune populations |
| object | either the name of the model to simulate <i>or</i> a previously computed ‘gpsim’ object |

Value

runS2I2R2 and continueS2I2R2 return objects of class ‘gpsim’ with ‘model’ attribute “S2I2R2”.

See Also

More example genealogy processes: [lbdp](#), [moran](#), [seir](#), [si2r](#), [siir](#), [simulate\(\)](#), [sir](#), [strains](#), [twospecies](#), [twoundead](#)

| | |
|------|---|
| seir | <i>Classical susceptible-exposed-infected-recovered model</i> |
|------|---|

Description

The population is structured by infection progression.

Usage

```
runSEIR(  
  time,  
  t0 = 0,  
  Beta = 4,  
  sigma = 1,  
  gamma = 1,  
  psi = 1,  
  omega = 0,

  E0 = 5,  
  I0 = 5,  
  R0 = 0  
)  
  
runSEIRS(  
  time,  
  t0 = 0,  
  Beta = 4,  
  sigma = 1,  
  gamma = 1,  
  psi = 1,  
  omega = 0,  
  S0 = 100,  
  E0 = 5,  
  I0 = 5,  
  R0 = 0  
)  
  
continueSEIR(  
  object,  
  time,  
  Beta = NA,  
  sigma = NA,  
  gamma = NA,  
  psi = NA,  
  omega = NA  
)  
  
continueSEIRS(  
  object,  
  time,  
  Beta = NA,  
  sigma = NA,  
  gamma = NA,  
  psi = NA,  
  omega = NA  
)
```

```
seirs_pomp(x, Beta, sigma, gamma, psi, omega = 0, S0, E0, I0, R0)
```

Arguments

| | |
|----------------|---|
| time | final time |
| t0 | initial time |
| Beta | transmission rate |
| sigma | progression rate |
| gamma | recovery rate |
| psi | per capita sampling rate |
| omega | rate of waning of immunity |
| S0, E0, I0, R0 | initial sizes of S, E, I, R compartments, respectively. |
| object | either the name of the model to simulate <i>or</i> a previously computed ‘gpsim’ object |
| x | genealogy in phylopomp format. |

Details

seirs_pomp constructs a ‘pomp’ object containing a given set of data and an SEIRS model.

Value

runSEIR and continueSEIR return objects of class ‘gpsim’ with ‘model’ attribute “SEIR”.

seirs_pomp returns a ‘pomp’ object.

simulate("SEIR",sigma=1,omega=1,time=20,I0=4) |>
  lineages(obscure=FALSE) |>
  plot()
```

si2r

Two-deme model of superspreading

Description

Deme 2 consists of "superspreaders" who engender clusters of infection in "superspreading events".

Usage

```
runSI2R(
  time,
  t0 = 0,
  Beta = 5,
  mu = 5,
  gamma = 1,
  omega = 0,
  psi1 = 1,
  psi2 = 0,
  sigma12 = 1,
  sigma21 = 3,
  S0 = 500,
  I0 = 10,
  R0 = 0
)

continueSI2R(
  object,
  time,
  Beta = NA,
  mu = NA,
  gamma = NA,
  omega = NA,
  psi1 = NA,
  psi2 = NA,
  sigma12 = NA,
  sigma21 = NA
)
```

Arguments

| | |
|------------------|---|
| time | final time |
| t0 | initial time |
| Beta | transmission rate |
| mu | mean superspreading-event cluster size |
| gamma | recovery rate |
| omega | rate of waning of immunity |
| psi1, psi2 | sampling rates for demes 1 and 2, respectively |
| sigma12, sigma21 | movement rates from deme 1 to 2 and 2 to 1, respectively |
| S0 | initial size of susceptible population |
| I0 | initial size of I1 population (I2 = 0 at t = 0) |
| R0 | initial size of recovered population |
| object | either the name of the model to simulate <i>or</i> a previously computed ‘gpsim’ object |

Details

Superspreaders (deme 2) behave differently than ordinary infections: transmission events occur at the same rate (Beta), but at each event, a superspreader infects N individuals, where

$$N \sim 1 + \text{Geometric}(1/\mu).$$

Thus, assuming susceptibles are not limiting, the mean number of infections resulting from a superspreading event is μ and the variance in this number is $\mu^2 - \mu$. If susceptibles are limiting, i.e., if the number of susceptibles is not greater than N , then all remaining susceptibles are infected.

Value

runSI2R and continueSI2R return objects of class ‘gpsim’ with ‘model’ attribute “SI2R”.

  x |> lineages(obscure=FALSE) |> plot(),
  ncol=1,
  align="v",axis="b"
)

```

siir

Two-strain SIR model.

Description

Two distinct pathogen strains compete for susceptibles.

Usage

```

runSIIR(
  time,
  t0 = 0,
  Beta1 = 5,
  Beta2 = 5,
  gamma = 1,
  psi1 = 1,
  psi2 = 0,
  sigma12 = 0,
  sigma21 = 0,
  omega = 0,
  S0 = 500,
  I1_0 = 10,
  I2_0 = 10,
  R0 = 0
)

continueSIIR(
  object,
  time,
  Beta1 = NA,
  Beta2 = NA,
  gamma = NA,
  psi1 = NA,
  psi2 = NA,
  sigma12 = NA,

```

```

    sigma21 = NA,
    omega = NA
  )

```

Arguments

| | |
|------------------|---|
| time | final time |
| t0 | initial time |
| Beta1, Beta2 | transmission rates from each of the infectious classes. |
| gamma | recovery rate. |
| psi1, psi2 | sampling rates. |
| sigma12, sigma21 | movement rates from deme 1 to 2 and 2 to 1, respectively |
| omega | rate of loss of immunity |
| S0 | initial size of susceptible population. |
| I1_0 | initial size of I1 population. |
| I2_0 | initial size of I2 population. |
| R0 | initial size of recovered population. |
| object | either the name of the model to simulate <i>or</i> a previously computed 'gpsim' object |

Value

runSIIR and continueSIIR return objects of class 'gpsim' with 'model' attribute "SIIR".

  plot()

```

simulate

*simulate***Description**

Simulate Markov genealogy processes

Usage

```
simulate(object, ...)

## Default S3 method:
simulate(object, ...)

## S3 method for class 'character'
simulate(object, time, ...)

## S3 method for class 'gpsim'
simulate(object, time, ...)
```

Arguments

| | |
|--------|---|
| object | either the name of the model to simulate <i>or</i> a previously computed ‘gpsim’ object |
| ... | additional arguments to the model-specific simulation functions |
| time | end timepoint of simulation |

Details

When object is of class ‘gpsim’, i.e., the result of a genealogy-process simulation, `simulate` acts to continue the simulation to a later timepoint. Note that, one cannot change initial conditions or t_0 when continuing a simulation.

Value

An object of ‘gpsim’ class.

sir*Classical susceptible-infected-recovered model*

Description

A single, unstructured population of hosts.

Usage

```
runSIR(  
  time,  
  t0 = 0,  
  Beta = 2,  
  gamma = 1,  
  psi = 1,  
  omega = 0,  
  S0 = 100,  
  I0 = 2,  
  R0 = 0  
)
```

```
runSIRS(  
  time,  
  t0 = 0,  
  Beta = 2,  
  gamma = 1,  
  psi = 1,  
  omega = 0,  
  S0 = 100,  
  I0 = 2,  
  R0 = 0  
)
```

```
continueSIR(object, time, Beta = NA, gamma = NA, psi = NA, omega = NA)
```

```
runSIRS(  
  time,  
  t0 = 0,  
  Beta = 2,  
  gamma = 1,  
  psi = 1,  
  omega = 0,  
  S0 = 100,  
  I0 = 2,  
  R0 = 0  
)
```

```
continueSIRS(object, time, Beta = NA, gamma = NA, psi = NA, omega = NA)
```

```
sir_pomp(x, Beta, gamma, psi, omega = 0, S0, I0, R0)
```

```
sirs_pomp(x, Beta, gamma, psi, omega = 0, S0, I0, R0)
```

Arguments

| | |
|------------|---|
| time | final time |
| t0 | initial time |
| Beta | transmission rate. |
| gamma | recovery rate. |
| psi | sampling rate. |
| omega | immunity waning rate |
| S0, I0, R0 | initial sizes of susceptible, infected, and recovered populations, respectively. |
| object | either the name of the model to simulate <i>or</i> a previously computed ‘gpsim’ object |
| x | genealogy in phylopomp format (i.e., an object that inherits from ‘gpgen’). |

Details

sir_pomp constructs a ‘pomp’ object containing a given set of data and a SIR model.

Value

runSIR and continueSIR return objects of class ‘gpsim’ with ‘model’ attribute “SIR”.

sir_pomp and sirs_pomp return ‘pomp’ objects.

  simulate(Beta=5,gamma=2,time=10,psi=3) |>
  plot()
```

```
runSIR(Beta=3,gamma=1,psi=2,S0=20,I0=5,R0=0,time=5,t0=-1) |>
```

```

plot(points=TRUE)

runSIR(Beta=3,gamma=0.1,psi=0.2,S0=100,I0=5,R0=0,time=2,t0=0) -> x
plot_grid(plotlist=list(plot(x,points=TRUE),diagram(x)),
  ncol=1,rel_heights=c(4,1))

simulate("SIRS",omega=1,time=20,I0=4) |> plot()
simulate("SIRS",omega=1,time=20,I0=4) |> lineages() |> plot()

```

strains

Three strains compete for a single susceptible pool.

Description

The three demes are three distinct pathogen strains that compete for susceptibles.

Usage

```

runStrains(
  time,
  t0 = 0,
  Beta1 = 5,
  Beta2 = 5,
  Beta3 = 5,
  gamma = 1,
  psi1 = 1,
  psi2 = 0,
  psi3 = 0,
  S0 = 10000,
  I1_0 = 10,
  I2_0 = 10,
  I3_0 = 10,
  R0 = 0
)

continueStrains(
  object,
  time,
  Beta1 = NA,
  Beta2 = NA,
  Beta3 = NA,
  gamma = NA,
  psi1 = NA,
  psi2 = NA,
  psi3 = NA
)

strains_pomp(

```

```

    x,
    Beta1,
    Beta2,
    Beta3,
    gamma,
    psi1,
    psi2,
    psi3,
    S0,
    I1_0,
    I2_0,
    I3_0,
    R0
  )

```

Arguments

| | |
|---------------------|---|
| time | final time |
| t0 | initial time |
| Beta1, Beta2, Beta3 | transmission rate for strains 1, 2, 3, respectively |
| gamma | recovery rate |
| psi1, psi2, psi3 | sampling rates |
| S0 | initial size of susceptible population |
| I1_0, I2_0, I3_0 | initial numbers of strain-specific infections |
| R0 | initial size of immune population |
| object | either the name of the model to simulate <i>or</i> a previously computed ‘gpsim’ object |
| x | genealogy in phylopomp format (i.e., an object that inherits from ‘gpgen’). |

Details

strains_pomp constructs a ‘pomp’ object containing a given set of data and the Strains model.

Value

runStrains and continueStrains return objects of class ‘gpsim’ with ‘model’ attribute “Strains”.
strains_pomp returns a ‘pomp’ object.

See Also

More example genealogy processes: [lbdp](#), [moran](#), [s2i2r2](#), [seir](#), [si2r](#), [siir](#), [simulate\(\)](#), [sir](#), [twospecies](#), [twoundead](#)

treeplot

*Fancy tree plotter***Description**

Plots a genealogical tree.

Usage

```
## S3 method for class 'gpgen'
plot(x, ..., time, t0, prune = TRUE, obscure = TRUE)

treeplot(
  tree,
  time = NULL,
  t0 = 0,
  ladderize = TRUE,
  points = FALSE,
  ...,
  palette = scales::hue_pal(l = 30, h = c(220, 580))
)
```

Arguments

| | |
|-----------|--|
| x | object of class 'gpgen' |
| ... | plot passes extra arguments to treeplot . treeplot passes extra arguments to theme . |
| time | numeric; time of the genealogy. |
| t0 | numeric; root time. |
| prune | logical; prune the genealogy? |
| obscure | logical; obscure the demes? |
| tree | character; tree representation in Newick format. |
| ladderize | Ladderize? |
| points | Show nodes and tips? |
| palette | color palette for branches. This can be furnished either as a function or a vector of colors. If this is a function, it should take a single integer argument, the number of colors required. If it is a vector, it should have at least as many elements as there are demes in the genealogy. |

Value

A printable ggplot object.

Examples

```
## Not run:
```

```
library(ggplot2)
library(phylopomp)
times <- seq(from=0,to=8,by=0.1)[-1]

```

```

    S2_0,
    I1_0,
    I2_0,
    R1_0,
    R2_0
  )

```

Arguments

| | |
|--------|---|
| time | final time |
| t0 | initial time |
| Beta11 | transmission rate within species 1 |
| Beta12 | transmission from species 2 to species 1 |
| Beta21 | transmission from species 1 to species 2 |
| Beta22 | transmission rate within species 2 |
| gamma1 | species 1 recovery rate |
| gamma2 | species 2 recovery rate |
| psi1 | per capita sampling rate for species 1 |
| psi2 | per capita sampling rate for species 2 |
| c1 | probability that a sampled (positive) host of species 1 is culled |
| c2 | probability that a sampled (positive) host of species 2 is culled |
| omega1 | rate of waning of immunity for species 1 |
| omega2 | rate of waning of immunity for species 2 |
| b1 | per capita birth rate for species 1 |
| b2 | per capita birth rate for species 2 |
| d1 | per capita death rate for species 1 |
| d2 | per capita death rate for species 2 |
| iota1 | imported infections for species 1 |
| iota2 | imported infections for species 2 |
| S1_0 | initial size of species 1 susceptible population |
| S2_0 | initial size of species 2 susceptible population |
| I1_0 | initial size of species 1 infected population |
| I2_0 | initial size of species 2 infected population |
| R1_0 | initial size of species 1 immune population |
| R2_0 | initial size of species 2 immune population |
| object | either the name of the model to simulate <i>or</i> a previously computed 'gpsim' object |
| x | genealogy in phylopomp format. |

Details

twospecies_pomp constructs a ‘pomp’ object containing a given set of data and a TwoSpecies model. Note that, for the moment, twospecies_pomp assumes that there is no importation of infection into the populations (i.e., $\text{iota1} = \text{iota2} = 0$).

Value

runTwoSpecies and continueTwoSpecies return objects of class ‘gpsim’ with ‘model’ attribute “TwoSpecies”.

twospecies_pomp returns a ‘pomp’ object.

yaml

YAML output

Description

Human- and machine-readable description.

Usage

```
yaml(object)
```

Arguments

object gpsim object.

Value

A string in YAML format, with class “gpyaml”.

Examples

```
simulate("SIIR",time=1) |> yaml()
```
